

Get Labels for Shipment

The Coll-8 Logistics **Label** endpoint can return shipment labels as **ZPL** or **PDF**

ZPL is the default option, if not format is specified

Get ZPL label(s) for a shipment

```
GET https://ship-api-uat.drop2shop.ie/api/label?trackingNumber=ShipmentTrackingNumber
```

Get PDF label(s) for a shipment

```
GET https://ship-api-uat.drop2shop.ie/api/label?
trackingNumber=ShipmentTrackingNumber&&labelType=pdf
```

Sample Request

```
GET https://ship-api-uat.drop2shop.ie/api/label?trackingNumber=DEVU110000000611
```

Query String parameters

- *trackingNumber* - the tracking number associated with the shipment
- *labelType* - zpl, pdf

Label Result

As shipments can have multiple packages, the ZPL is returned as a string array.

The body is wrapped in a **data** attribute (for later Hypermedia improvements) and the data is in the **zpl** property.

```
{
  "data": {
    "zpl": ["string-1", "string-2"]
  }
}
```

Sample Response

```
{
  "data": {
    "zpl": [
